

Implement ***Project Intel*** and improve the certainty
of your project cost and schedule outcome.

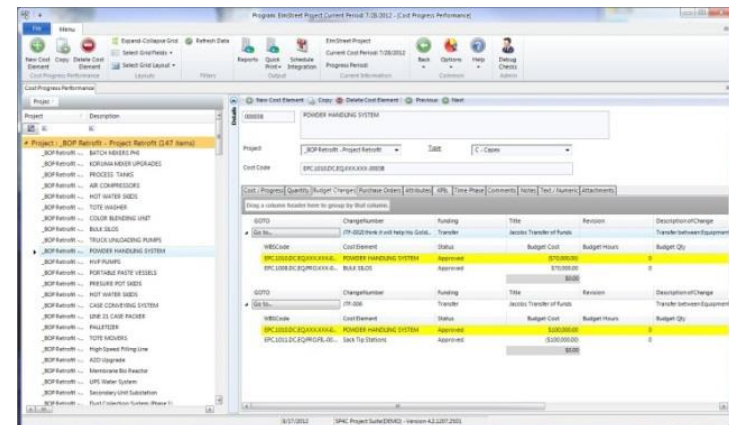

We provide Project Management solutions for constructors and owners that enhance project controls delivery, and leads to improved project team efficiencies, predictable project costs, and expedited commissioning and start-ups.

Why is Project Intel different from other solutions?

- Focused on the constructors and client's needs
- Designed for CapEx program and portfolio management.
- Consolidates data from various sources, such as Primavera, MS Project, SAP, Oracle, PeopleSoft, data warehouses, and others.
- Provides integrated modules to perform daily project activities.
- Eliminates the proliferation of spreadsheets with duplicate data.
- Configurable to reflect your company's processes, forms, and reports for intuitive analysis.

Why users adopt the software?

- Familiar spreadsheet (Excel like) input
- Customizable by user
- Reduces redundant data entry
- Quickly finds issues

A typical project has many participants from different organizations with objectives and agendas that are not always aligned with the Owner's.

Vendors and Suppliers

Architects and Designers

Owners

Engineers

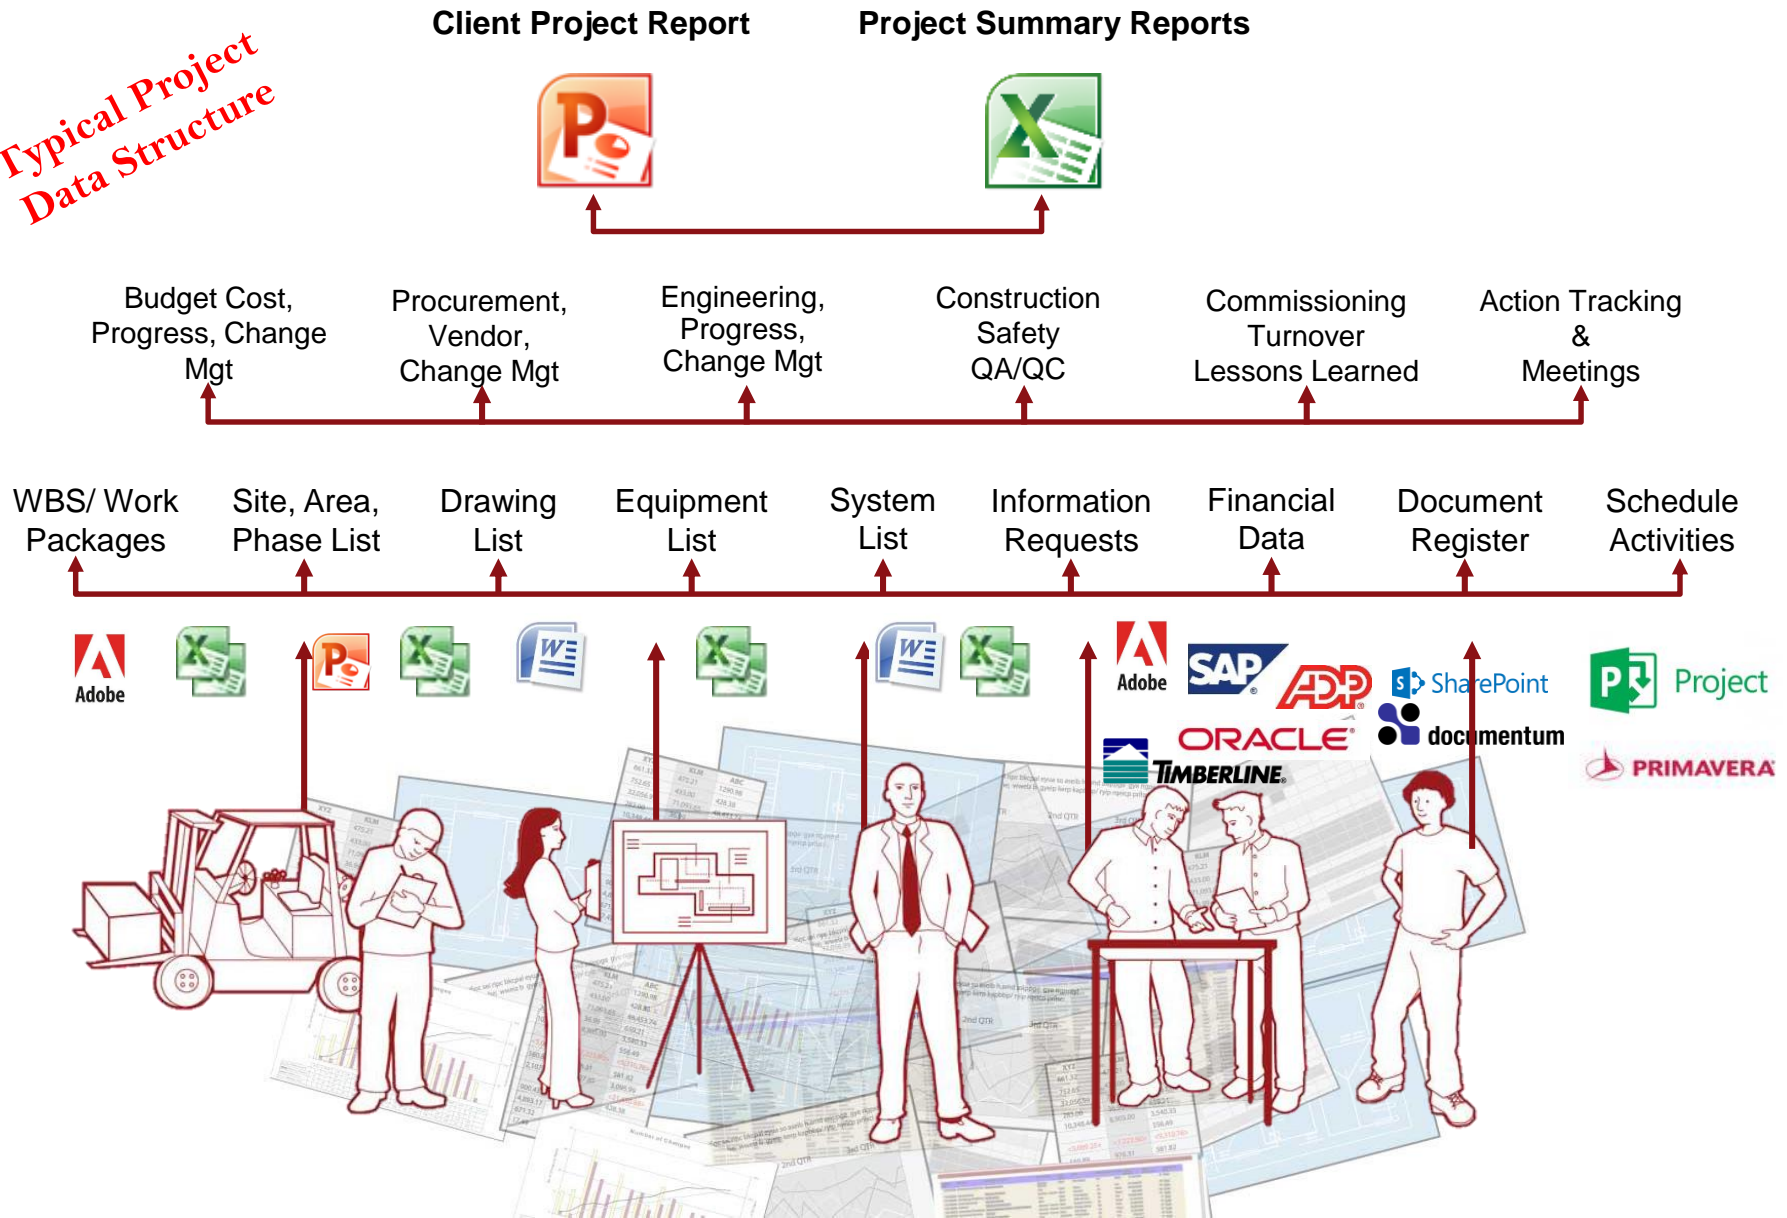

Construction Teams

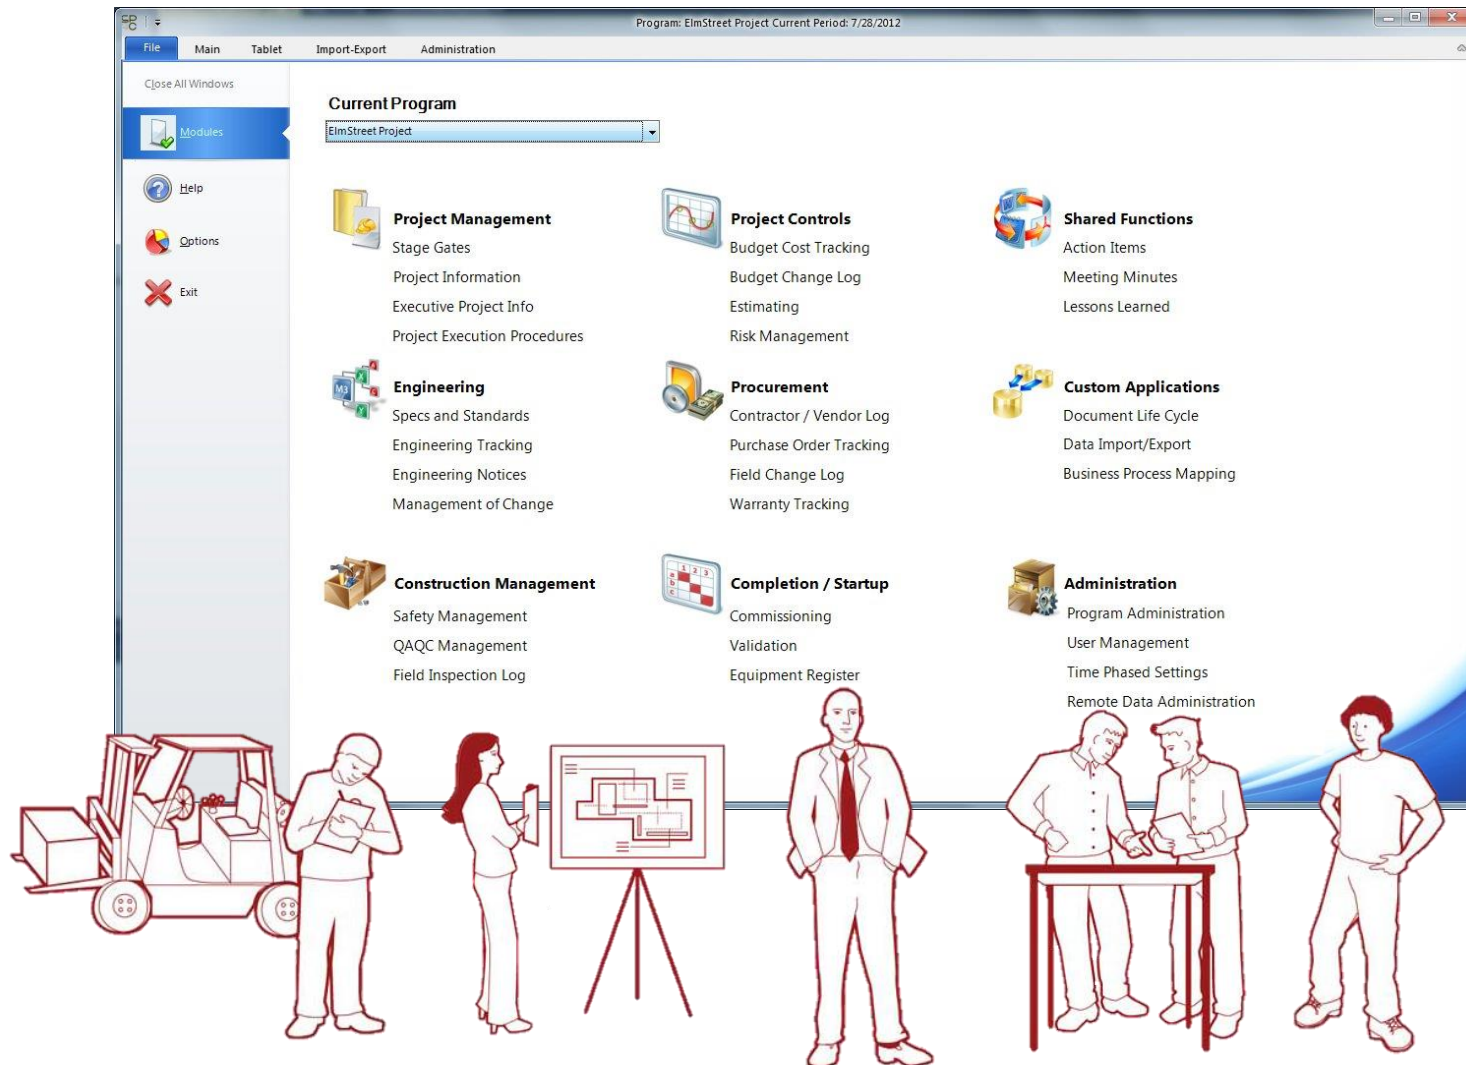

A project uses data in numerous formats from various sources, but consolidation and reporting is time consuming and accuracy is suspect.

Typical Project Data Structure

Project Intel provides a consistent, controlled location to gather and share data to perform daily activities for all project functions.

Project Intel receives data from internal sources and replaces spreadsheets, but still creates them for reporting, providing a familiar interface and approach.

Project Information

Executive Project Info

Project Execution Procedures

The single location for Project Managers and executives to review the high-level status of projects, view dashboard values, and create monthly reports.

- Focused on high-level trends and analysis
- Consistent view of all projects
- Summary from all functions

Receives

- Cost
- Changes
- Milestones
- Action Status
- Turnover
- Safety
- QA/QC
- Engineering Progress

Feeds

- Project Reports
- Lessons Learned
- Dashboards
- External Systems (SAP, Oracle, ADP)

Management of Change

Field Inspection Log

[illegible]

- Safety Issues, Forms, Closure
- Customized QA/QC reports and forms
- Project defined Field Inspection that link into Action Tracking

- Project Management
- Budget Change
- Equipment List
- Turnover / Commissioning
- Lessons Learned

Project Controls module

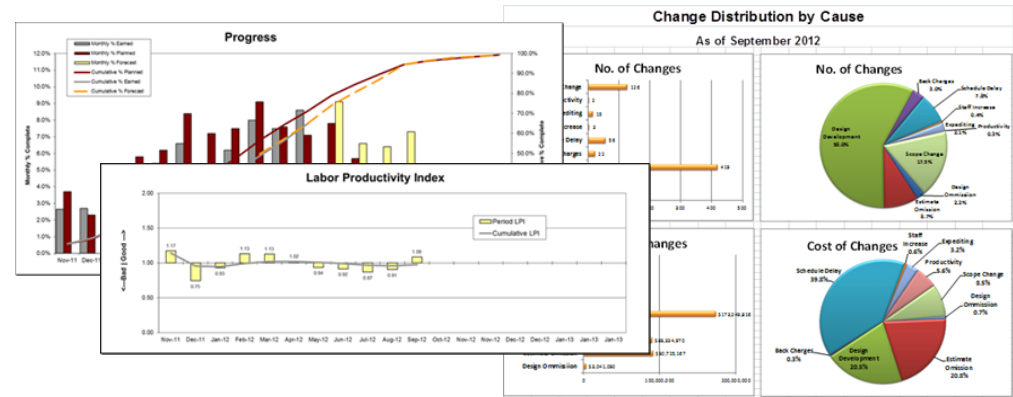

Project Controls

Cost Progress Performance

Change Management Log

Schedule

Risk Management

Following best practices of Earned Value Management, this is where Cost and Progress Measurement combine with Schedule to track all cost elements, review progress, manage change orders, and forecast future cost.

- Cost Coding and WBS
- Earned Value Management
- Budget Change Control/Approvals
- Forecast creation and analysis
- Rollup and cross-code analysis

Receives

- Schedule
- Budgets
- Subcontract values
- Remote time & progress
- Financial Feeds (SAP/Oracle)
- Forecasts

Feeds

- Project Management
- Monthly Reports
- Financial Systems (SAP/Oracle)
- Action Tracking
- Lessons Learned

Procurement / Subcontract Management module

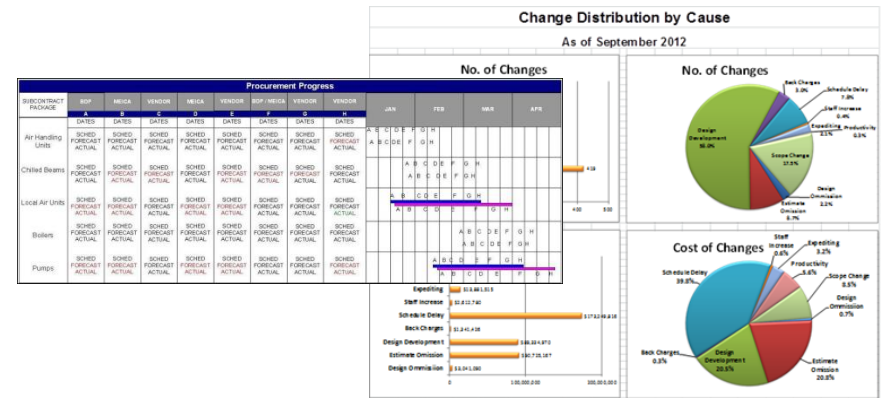

Procurement

Contractor / Vendor Log

Purchase Order Tracking

Field Change Log

Warranty Tracking

The place to manage subcontract PO tracking and field change management, as well as integration and review of invoices and warranty related items.

- Commitments/ Actuals analysis
- Forecast analysis
- Warranty Issue tracking
- Feeds from SAP/Oracle/JDE/MRO

Receives

- Vendor/PO Feeds (SAP/Oracle)
- Subcontract Change
- Equipment List

Feeds

- Project Management
- Budget Cost
- Budget Change
- Action Tracking
- Equipment List
- Turnover / Commissioning
- Lessons Learned

Data used to populate the final cost report comes from the sources where data is properly generated.
